

# Advanced Certificate in Data Protection Operational Excellence

The Advanced Certificate in Data Protection Operational Excellence comprises of five modules covering operational aspects in data protection and information security. It also includes practical application for Data Protection by Design and Data Protection Impact Assessment.

The modules will provide participants with practical activities to gain understanding and competencies for operational excellence in data protection. Participants will learn to implement data protection and privacy management, data protection by design and conduct data protection impact assessments.

The application and implementation of activities will focus on Singapore's PDPA. Participants will learn to look critically at the impact of future technological developments and adopt a proactive approach to data protection risks, including a hands-on approach to information and cyber security from a management perspective.

Upon successful completion of all modules, graduates will be awarded the Advanced Certificate In Data Protection Operational Excellence. In addition, graduates will be awarded the following three kinds of credentials (upon successful completion of the respective professional exams, exams fees and membership payable separately) :

- DPO Proficiency Certificate
- Certified Information Privacy Manager (CIPM)
- Information Security Certification
